

vigilant Test and Requirements Engineers for High Tech Startup wanted

vChain is on a mission to enable zero-trust computing using blockchain technology.

We're a fast-growing international team with offices in Europe and the US. We look for the smartest, most-driven and hard-working coders out there. Our mission is to increase the average company IQ with every new hire.

Our management team has built several very successful companies in the past and is highly respected in the industry. We're about to shake up an enormously fragmented ecosystem of technologies, languages, tools, frameworks, protocols and the like. We are software engineers who build Open Source tools for people like us.

Required skills

Your responsibility will lie in moving product increments from idea stage to specification and automated test. You are someone who strives to clarify and understand a requirement to its very detail, you enjoy communicating it and - most of all - you are driven to ensure it keeps working once it has been released. Therefore it is key that you provide expert knowledge of the following:

- Agile methodologies, specifically Behaviour Driven Development
- Test automation
- JavaScript, Python, C or Java

You are Kung-fu master of

- IT architecture patterns
- Automated testing of both the server side and user interfaces (e.g. Postman, [cypress.io](https://www.cypress.io))
- Software pipeline automation, CI/CD
- and most of all: working in a great team

You identify strongly with

- Achieving the impossible: Getting quality software out on time
- Communicating properly: very good command of written and spoken English
- Working independently: we don't micromanage, and we only look at results
- Keeping focused: if you're working from home, a room with a door is important
- Staying online: remote collaboration requires bandwidth and a stable connection!

What we offer

- A likely perfect combination of remote work, tight online collaboration and occasional worldwide face-to-face meetings & fun

- An opportunity to work with hand-picked experts from their fields - a brilliant opportunity to learn and grow
- A competitive salary with a stock option plan

Apply today

Please send your application including cv, portfolio or code examples to Mathias explaining your motivation and why we should hire you.
