

vibrant Web Developers for High Tech Startup wanted

vChain is on a mission to enable zero-trust computing using blockchain technology.

We're a fast-growing international team with offices in Europe and the US. We look for the smartest, most-driven and hard-working coders and engineers out there. Our mission is to increase the average company IQ with every new hire.

Our management team has built several very successful companies in the past and is highly respected in the industry. We're about to shake up an enormously fragmented ecosystem of technologies, languages, tools, frameworks, protocols and the like. We are software engineers who build Open Source tools for people like us.

Required skills

Your responsibility will predominantly lie in developing the user interfaces and their server backends of our product. You are familiar with writing and maintaining micro-services that interact between client installations (e.g. web application, browser extensions or command line interfaces) and our secure storage backends.

Therefore, it's key that you know something about everything in the web architecture space but really everything about something specific. Looking at today's and especially tomorrow's technology landscape, impress us with expert knowledge of the following:

- JavaScript and Python
- REST architectures, Websockets

You are Kung-fu master of

- Django framework or similar
- pip and npm, Docker
- Web applications integrations: Payments, SMS, Hardware/Software Token, KYC
- Software pipeline automation
- Visualizing data
- and most of all: working in a great team

You identify strongly with

- Communicating properly: very good command of written and spoken English
- Working independently: we don't micromanage, and we only look at results
- Keeping focused: if you're working from home, a room with a door is important
- Staying online: remote collaboration requires bandwidth and a stable connection!

What we offer

- A likely perfect combination of remote work, tight online collaboration and occasional worldwide face-to-face meetings & fun
- An opportunity to work with hand-picked experts from their fields - a brilliant opportunity to learn and grow
- A competitive salary with a stock option plan

Apply today

Please send your application including cv, portfolio or code examples to Mathias explaining your motivation and why we should hire you.
